

Flowza User Manual

Version: Flowza v1.0.4

Introduction

Flowza is a Telegram publishing workspace for teams.

Getting Started

Create workspace, add destination, compose post, publish or schedule.

Workspace

Use workspace manager for isolated operations.

Destinations

Manage channels/groups and ownership.

Posts

Composer supports text and media drafts with preview.

Publishing

Publish only to valid scoped destinations.

Scheduling

Schedule existing drafts with timezone-aware runs.

Templates

Use placeholder variables for reusable content.

Collections

Group destinations for batch operations.

Media Library

Store Telegram file IDs for reuse.

Approval Flow

Editors submit, admins approve/reject.

Analytics

Track publishing and usage metrics.

Settings

Use settings to control approval workflow behavior for editors and admins.

FAQ

Use Help Center and support contact paths.

Support

Contact @Lazy999000 at <https://t.me/Lazy999000>.

Troubleshooting

Check bot permissions, workspace scope, destination validity, and role mapping.

Flowza Version

Flowza v1.0.4

ADMIN GUIDE

ADMIN GUIDE Product: Flowza v1.0 Version: Flowza v1.0.1 ## Purpose Admin accounts operate content workflows for their own business scope and may optionally manage editor collaboration. ## Current Admin Capabilities (Implemented) - Manage destinations (add, list, set default, remove) - Compose drafts (text, photo, GIF, video, document, album) - Publish to destination - Create and manage schedules - Toggle approval workflow in settings ## Current Admin Workflow 1. Open dashboard and enter Destin

EDITOR GUIDE

EDITOR GUIDE Product: Flowza v1.0 Version: Flowza v1.0.1 ## Purpose Editors support content production for an Admin scope. ## Current Editor Capabilities (Implemented) - Access post composer - Create and edit drafts - Access scheduler flows ## Current Editor Restrictions (Implemented) - Cannot manage destinations - Cannot toggle admin settings - Publish is blocked when admin approval workflow is enabled ## Planned Editor Enhancements - Assigned destination and workspace visibility - Approval q

OWNER GUIDE

OWNER GUIDE Product: Flowza v1.0 Version: Flowza v1.0.1 ## Purpose The Owner is the single platform authority responsible for platform governance, not day-to-day customer content operations. ## Current Owner Capabilities (Implemented) - Global superuser access through OWNER_ID fallback - Access to destination management - Access to post composer and publish actions - Access to scheduler controls - Access to settings dashboard ## Current Owner Workflows 1. Set OWNER_ID in environment configurat

DATABASE

DATABASE Product: Flowza v1.0 Version: Flowza v1.0.3 ## Engine - SQLite ## Current Tables 1. bot_settings - Purpose: generic key/value settings store. 2. channels - Purpose: destination records and default destination flag. 3. drafts - Purpose: draft payload storage for text/media/album composer flows. 4. scheduled_posts - Purpose: scheduled publication queue metadata and execution state. 5. user_roles - Purpose: RBAC assignment records for owner/admin/editor users. 6. admin_settings - Purpose

ARCHITECTURE

ARCHITECTURE Product: Flowza v1.0 Version: Flowza v1.0.3 ## Overview Flowza uses a modular Python architecture with clear separation between routing, handlers, keyboard builders, and database access. ## Layers - Entry layer: - bot.py initializes app, DB modules, routers, and polling - Routing layer: - routers/callback_router.py dispatches callback_data actions - routers/message_router.py dispatches state-based messages - Handler layer: - handlers/* implement destination, post, scheduler, setti
